**LEGAL ISSUES OF BUSINESS
DIGITALIZATION: LESSONS
LEARNED FROM #EllexDigital**

October 28 (Friday)

10:00 – 11:00

Legal issues of business digitalization: lessons learned from #EllexDigital

Common sense in 2022 that businesses increase productivity and efficiency by digitalizing day-to-day processes and tools. What is sometimes not that common sense – complex legal conclusions behind digital tools that either get agreed correctly or (otherwise) boomerang back through legal issues.

Ellex integrates digital competence into many areas of law and helps clients to avoid problems related to business digitalization: formalization of contractual relations, risk assessment, allocation between the parties and management, and subsequent liability.

In the webinar, the #EllexDigital team will share their experience of the past years: what are the most common legal problems of digitalization in business and what to learn from them?

- Concept of computer programs and their protection: legal regulation vs. common understanding of IT business and customers
- Concept and features of open-source software
- Problematic aspects of IT contracts (limitations of liability, data migration, influence of the Anglo-Saxon law)
- Cloud services
- Service level agreements (SLA)

Speakers

Dr. Ažuolas Čekanavičius

Associate Partner

 azuolas.cekanavicius@ellex.legal

Kotryna Seliutaitė

Associate

 kotryna.seliutaite@ellex.legal

REGISTRATION

The webinar will be held on the Youtube platform (Lithuanian language). The link will be send to all the registered participants before the event.
